Aykut Eren Şahin

Pendik, İstanbul, Türkiye • (+90) 5461500831 • aykuterensahin@gmail.com • github.com/AykutErenSahin • linkedin.com/in/aykut-eren-sahin

Education

ATILIM UNIVERSITY — Ankara, TR
B.S., Computer Engineering (English) (ÖSYM Full Scholarship) — May 2026

YUCEL BORU FEN LISESI (Science High School) — Kocaeli, TR
May 2020

Experience

MADDUCK — Istanbul, TR
Data Intern — July 2025 – Sep. 2025

- Developed an end-to-end 'case handling' automation workflow by integrating Google Sheets, Slack, and Lemlist APIs, significantly streamlining the sales lead qualification process.
- Automated recurrent data processing and reporting by building an AWS-hosted Python pipeline to fetch, transform, and write cleaned data directly to Google Sheets.
- Engineered an automation bridge between Pipedrive CRM and Asana using scheduled services, automatically creating and assigning tasks to owners based on deal reply triggers.
- Authored multiple Google Apps Scripts and Python scripts to automate data validation, bulk-importing (Lemlist), and market research data scraping.
- Documented all automated workflows by creating end-to-end SOPs and playbooks for team use.

ALBARAKA TÜRK — Istanbul, TR
Data Science Intern — July 2024 – Aug. 2024

- Developed a time-series 'prediction' model using Python, Pandas, and Prophet to accurately forecast daily user login counts for the mobile banking application.
- Engineered an NLP classification system to function as a 'Log Analytics' solution for customer feedback, automatically categorizing Turkish-language requests and complaints.
- Utilized Python to perform text preprocessing in Turkish, TF-IDF vectorization, and model training with Naive Bayes and Linear SVC algorithms.

Projects

AI-Driven Dynamic Insurance Pricing System (Graduation Project) | PyTorch, OpenAI Gym, Scikit-learn

- Architected an end-to-end AI framework replacing static actuarial models with dynamic pricing, combining survival analysis and deep reinforcement learning.
- Developed a non-linear Cox Proportional Hazards neural network using PyTorch, achieving a highly accurate C-Index of 0.9815 for clinical risk stratification.
- Built a custom market simulation environment using OpenAI Gym to model stochastic customer behavior and claim probabilities.
- Engineered a Deep Q-Network agent equipped with a Target Network to dynamically optimize premium multipliers, effectively balancing short-term profitability with long-term brand reputation and customer retention.

Leadership and Activities

KODA (RURAL SCHOOLS TRANSFORMATION NETWORK) — Ankara, TR
Volunteer Team Member — 2023 – Current

- Contributed to program R&D initiatives and currently provide operational and logistical assistance within the Running Support Team.

Skills & Interests

- **Programming & Tools:** Python, C/C++, JavaScript (GAS), AWS, Google Apps Script, API/Webhook Integrations, Git/GitHub
- **AI & Deep Learning:** Deep Learning, PyTorch, Reinforcement Learning (DQN), Survival Analysis, Machine Learning (Scikit-learn), NLP, Prophet
- **Data & Libraries:** Pandas, NumPy, OpenAI Gym, NLTK, Zemberek
- **Language:**Turkish (Native), English (Fluent / C1), Japanese (JLPT N5/N4)
- **Interests:**Football, Volleyball, Backpacking, Camping
